CITROSOL AK TROPICALES UE

Reduces weight loss and mitigates chilling injury

CITROSOL AK Tropicales UE has been specifically developed to increase the shelf life of tropical fruit such as mango. This protective coating mitigates damage from chilling injury and consequently reduces the incidence of decay, as the chilling injury wounds would facilitate a route for pathogenic fungi to penetrate the fruit.

Minimises weight loss, maintains firmness and reduces wrinkling of the mango, without altering the organoleptic quality of the fruit.
