

**INTEGRAL SYSTEM FOR THE
HYGIENIC WASHING OF MINIMALLY
PROCESSED FRUIT AND VEGETABLE
PRODUCE (IV RANGE)**

CITROCID[®] FRESH-CUT SYSTEM

The CITROCID[®] FRESH-CUT SYSTEM guarantees food safety, prolongs the commercial life of the product and reduces water consumption during the washing process. This reduction in water consumption affords significant energy savings, thus contributing to responsible energy usage and the sustainable development of the IV Range industry.

With CITROCID[®] FRESH-CUT SYSTEM you reduce costs, your water footprint and your carbon footprint.

Our system renders all types of microorganisms inactive, including pathogens which are potentially dangerous for human health, in addition to reducing the surface microbiological load and cross-contamination; by doing this, we avoid contamination of the pulp during processing and cutting of the entire fruit.
